November 21-25, 2021 Hybrid Online/Offline Symposium

Symposium Program

Welcome Message from the Symposium Chair

Dear ISH 2021 participants,

On behalf of the Executive Committee, it is my great honour to welcome you to attend the International Symposium on High Voltage Engineering (ISH 2021). ISH 2021 will be held in Xi'an, China from 21-25 November 2021. ISH 2021 is organized by Xi'an Jiaotong University, State Key Laboratory of Electrical Insulation and Power Equipment, Chinese Society for Electrical Engineering, Chinese National Committee of CIGRE, High Voltage Technical Committee, China Electrotechnical Society, Engineering Dielectrics Technical Committee, and The International Council on Large Electric Systems.

The ISH series was founded by Professor Hans Prinz in 1972. The symposia have been successfully held in Munich, Germany (1972), Zurich, Switzerland (1975), Milan, Italy (1979), Athens, Greece (1983), Braunschweig, Germany (1987), New Orleans, USA (1989), Dresden, Germany (1991), Yokohama, Japan (1993), Graz, Austria (1995), Montreal, Canada (1997), London, United Kingdom (1999), Bangalore, India (2001), Delft, Netherlands (2003), Beijing, China (2005), Ljubljana, Slovenia (2007), Cape Town, South Africa (2009), Hannover, Germany (2011), Seoul, South Korea (2013), Pilsen, Czech (2015), Buenos Aires, Argentina (2017), and Budapest, Hungary (2019).

ISH is one of the most influential international conferences with large scale and high academic level in the field of high voltage and insulation technology. After the vigorous review process, 466 papers of high quality from scientists, researchers, and engineers in the field of high voltage engineering from different countries have been accepted. In addition, in order to provide a better platform for scientists, researchers and engineers to exchange ideas and enlighten new research directions, the academic committee of ISH 2021 already invited top experts in the field of high voltage engineering to give plenary and invited presentations.

I believe ISH 2021 will provide an excellent forum to present results, advances and discussions among engineers, researchers and scientists, and to share ideas, knowledge and expertise on high voltage engineering. At ISH 2021, the tradition will meet the challenges of the twenty-first century such as HVDC transmission, distributed generations, smartening of power networks, and integration of renewable energies, etc.

The success of the symposium depends on your active particapation and engagement with scientific and technical discussions. We sincerely welcome you to participate in the Symposium on November 21-25, 2021 via online conference based on the Covid-19 pandemic situation. We can discuss scientific issues in the field of high voltage engineering together, exchange the latest research results, and inspire new academic ideas through brainstorming. I hope you will enjoy the program prepared for you and look forward to greeting you all at the virtual conference!

Shengtao Li Chair of ISH 2021 Xi'an Jiaotong University, China

Conference Information

Official Language

The official language of ISH 2021 is English, which will be used in all presentations and materials.

Hans Prinz Memorial Lecture

The Hans Prinz Memorial Lecture is named in honor of Professor Hans Prinz, a pioneer in high voltage engineering and the founder of the ISH. ISH 2021 will open with the Lecture as the keynote session of the symposium. The award committee of ISH 2021 selects Professor J. Y. Koo to give the Hans Prinz Memorial Lecture at the opening ceremony. The duration of the Hans Prinz Memorial Lecture is about 1 hour, including 10 minutes for questions.

The Hans Prinz Memorial Lecture will be postphoned to the next ISH.

Guidelines for Plenary Presentations

Each plenary speech is allocated 40 minutes, including about 5-10 minutes for questions.

Guidelines for Oral Presentations

Each invited speech is allocated 25 minutes, including about 5 minutes for questions. Each paper in an oral session is allocated 15 minutes, including about 3 minutes for questions. The PPT template of ISH 2021 can be downloaded from the website www. ish2021.org. Please send the PPT or PDF version of PPT file named with the paper ID to our Email: ish2021@xjtu.edu.cn by the 20th of November 2021. This is only to enable the session chairs to show the presentation slides via Zoom, in case there are technical issues preventing any authors to show their PPT slides. Only session chairs and co-chairs will have access to presentation files, and the files will be deleted after the symposium.

Guidelines for Semi-oral Presentations

In order to ensure the quality of the hybrid online/offline conference, the executive committee decided to change all poster sessions to semi-oral sessions. Each paper in a semi-oral session is allocated 5 minutes, including about 1–2 minutes for questions. Please send the PPT or PDF version of PPT file named with the paper ID to our Email: ish2021@xjtu.edu.cn by the 20th of November 2021. This is only to enable the session chairs to show the presentation slides via Zoom, in case there are technical issues preventing any authors to show their PPT slies. Only session chairs and co-charis will have access to presentation files, and the files will be deleted after the symposium.

Virtual venue

All sessions will be held with Zoom. Please download the Zoom software at the website <u>https://zoom.us/</u> and familiarize yourself with the software. Sessions will typically open 20–30 minutes before the start to

allow presenters to test their microphones and/or camera are working. The conference Zoom ID will be posted on the website <u>www.ish2021.org</u>. Please pay attention to the information on the ISH 2021 website before the start of the conference. The Password of Zoom conference is ISH2021.

Registration

All symposium attendees must register for the symposium. Registration is online via: <u>https://www.ish2021.org/col.jsp?id=104</u>

Registration includes downloads of the proceedings and access to all Zoom live sessions.

Best Paper Awards

Prizes of \$500USD each will be awarded to the 15 (8 oral and 7 poster) best papers of the Conference. To be eligible for consideration, the papers must be orally or poster presented by the first author who is a full-time graduate student.

Technical Tours

According to the requirements of pandemic prevention, there are no technical tours planned in 2021.

Recent Advance in Optical Measurement Techniques for Elucidation of High Voltage Phenomena

Professor Akiko Kumada The University of Tokyo, Japan

Synopsis

The remarkable development of optical measuring technology in recent years enables the better understanding of high voltage phenomena. In this talk, the optical sensors for measuring the electric field and voltage are reviewed. Pockels sensors, which utilize the first-order electro-optical effect, are often used to measure electric fields and voltages by inserting the sensor into the space to be measured. While unique sensors have been developed at the laboratory level and are being used to measure high voltages and electric fields, venture companies launched commercial sensors, and they are now being actively used in the field of electrical discharge applications. In the IEC, SC86C has been working on the standardization of optical fiber sensors in recent years, and the standardization of the Pockels electric field sensor is expected to progress following to that of the Faraday current sensor. The ideal electric field measurement method should be sensitive with high temporal and spatial resolution without disturbing the field. Many studies have been conducted to realize such ideal sensor using the 3rd order susceptibility of measured medium itself: sensing techniques based on Kerr effect of the medium enables non-invasive probing especially in liquid, but it sacrifices time and spatial resolution in applying to gas due to its low sensitivity. On the other hand, although the E-FISHG method requires an intense, short-pulse laser, it has extensively attracted much attention in recent years because of its high sensitivity and the applicability of non-invasive electric field measurement in gas.

Biography

She received the B.Eng., M.Eng., and Dr. degrees in electrical engineering from the University of Tokyo in 1994, 1996, and 1999, respectively. After working as a research associate in the same university from 1999 to 2001, she joined the Tokyo Electric Power Company as a researcher from 2001 to 2003. Since April 2003, she has been with the Department of Electrical Engineering and Information Systems of the University of Tokyo and is now a professor and directs high voltage laboratory. Her research area covers the insulation of power apparatus, the current interruption, the development of advanced optical/electrical sensors for measuring high voltage phenomena and clarification of discharge phenomena, and the computational approach for understanding dielectric properties.

INVITED SPEAKER

Electric Performance of New Non-SF6 Gases and Gas Mixtures for Gas-insulated Systems

Professor Christian M. Franck Swiss Federal Institute of Technology Zurich, ETH Zurich, Switzerland

Synopsis

Sulfur hexafluoride (SF6) is widely used for decades as insulation and switching medium in electrical equipment. However, due to the extremely high global warming potential (GWP), its use and handling is strongly regulated in most countries, and revisions of the legislation in some countries are even aiming at phasing out the use in electric power equipment completely. Several alternative insulation technologies exist, such as air insulation, solid insulation, liquid insulation, or gas insulation with natural-origin and/or new molecules.

In the last years, new gases or gas mixtures, based on fluorinated molecules, were identified for their good electric properties and potential to be used in electrical equipment in real operating conditions. However, it is still difficult to judge the true potential of these new gases and it is even more difficult to compare the different solutions. With the aim of working towards a comparative technical assessment of the new F-gas proposals, a Cigre WG (D1.67) was founded in 2017. The summary of the state-of-the-art in literature revealed that such a comparison is incomplete and not possible based on publicly available information, partly the information is even contradictory. The working group thus decided to actively work on this topic and go beyond the state-of-the-art by collecting information on what needs to be known for designing gaseous insulation systems in practice, by proposing a set of tests and test procedures that can serve as the basis for a more holistic comparison and finally also by performing and evaluating a large number of tests in a round-robin test campaign. In addition, a round-robin test campaign was also conducted with respect to measuring the concentration of the fluorinated compounds in these mixtures.

This plenary talk will give an overview on the current legal and technical status of SF6 alternatives in electric power equipment, together with details of the preparations, results and analysis of the round-robin campaigns in working group D1.67.

Biography

Christian M. Franck studied physics at the Universities of Bonn (Germany), Edinburgh (Scotland), and Kiel (Germany) where he graduated 1999 with a diploma. Afterwards he worked at the Max-Planck-Institute for Plasma Physics in Greifswald (Germany) in the area of electromagnetic wave propagation in magnetized plasmas, receiving his Ph.D. in experimental physics in 2003. Then he worked at the ABB Research Centre in Baden (Switzerland) in the area of current interruption, limitation and high voltage insulation. In January 2010 he joined ETH Zurich as Professor for high-voltage engineering. He is married and has three children.

His current research and teaching is in the area of "technologies for future electric energy transmission systems" with focus in the areas of High-Voltage Gaseous and Solid Insulation Systems as well as Current Interruption. Christian Franck acted as the convenor for Cigre WG D1.67.

INVITED SPEAKER

The Technologies of On-line Monitoring and Operation of UHV Transformer Kind Equipment

Dr. Peng Li Chief Engineer, China Electric Power Research Institute, Beijing, China

Synopsis

Due to huge transmission capacity of UHV projects and high voltage level of power equipment, when some faults occur like internal discharge and breakdown of ground insulation, they could be very destructive and produce huge instantaneous energy. Till now, several major industrial accidents have taken place owing to the fault in OLTC or bushing, some of which even escalated into substation fire disasters. These accidents lead to serious economic losses and pose great threats to power grid. The existing on-line monitoring technologies used in UHV transformer equipment face many bottleneck problems, such as insufficient quantity of monitoring states, separate design of each monitoring quantity, insufficient reliability of monitoring system, and data chimney. Aiming at above problems, a systematic solution has been proposed in this paper with the development of the integrated monitoring terminal. The solution uses a variety of hardware interface, uniform communication protocols, uniform high standard protection and uniform data compacting processing. Considering the integrated design of primary equipment, this solution is capable of doing flexibly scalable calculation and thus dramatically enhances the accuracy of fault detection. Multi-means integrated online monitoring technology is deemed as a future trend, but there are still many problems to be solved. The concepts of standardization, modularization and openness mentioned in this paper is a kind of attempt, which is a supplement to the existing series of standards as well as a strong support for the introduction of more effective new monitoring technologies.

Biography

Dr. Li Peng received his B.S. and Ph.D. degrees in electrical engineering from Xi'an Jiaotong University (XJTU) in 1997 and 2016 respectively. After two years' work in an electric power company, he received his M.S. degree from North China Electric Power University (NCEPU) in 2002. He is currently Chief Engineer of China Electric Power Research Institute (CEPRI), head of National Field Scientific Observation and Research Station for Tibet High Altitude Electromagnetic Environment and Electromagnetic Safety and deputy director of State Key Laboratory of Power Grid Environmental Protection. He is also Member of CIGRE A3 and was awarded as the Excellent Researcher on Electric Power Science and Technology in China. He has gained over 18 years' experience from the academy, utility and consultancy in the fields of power transmission and transformation, and engaged for long in researches on the test and insulation characteristics of power transmission and transformation equipment, as well as the insulation and operation characteristics of power transmission. He engaged in the localization study of \pm 800kV converter transformer and led the research on \pm 1100kV DC transmission key technology, the fault analysis of OLTC in converter transformer, the grainoriented silicon steel used for UHV Transformer and the UHV AC GIL key technology. He can be contacted at lipeng@epri.sgcc.com.cn.

INVITED SPEAKER

High Voltage Goes Green – New Requirements for a Sustainable Future

Professor Stefan Tenbohlen University of Stuttgart, Germany

Synopsis

The effects of climate change show us almost every day that measures to reduce CO2 emissions are of enormous importance. The European Commission has announced a Green Deal, which contains a number of political initiatives with the overarching goal of making Europe climate neutral by 2050. In the future, the energy system will be heavily dependent on renewable energies, in particular wind, photovoltaics and hydropower. The power grid and its high-voltage components will therefore be confronted with considerable new requirements.

In recent years science, research and industry have developed new materials and devices that enable low-emission or emission-free production and operation. Based on the requirements presented, this keynote shows new developments in the field of power transformers, power cable systems and switchgear. The greenhouse gas sulfur hexafluoride SF6 can be replaced by various environmentally friendly alternatives. The controversial topic of the new construction of high voltage lines is supplemented by new perspectives. Vegetable oil as an insulating liquid can replace fossil mineral oil. The knowledge of the overload capacity of transformers is of great interest to network operators, especially with heavily fluctuating load profiles. Short-term and long-term economic aspects must be considered. The thermal modeling enables a quantitative recording of the overload potential.

Biography

Stefan Tenbohlen received his Diploma and Dr.-Ing. degrees from the Technical University of Aachen, Germany, in 1992 and 1997, respectively. 1997 he joined ALSTOM Schorch Transformatoren GmbH, Mönchengladbach, Germany, where he was responsible for basic research and product development. From 2002 to 2004 he was the head of the electrical and mechanical design department. 2004 he was appointed to a professorship and head of the Institute of Power Transmission and High Voltage Technology of the University of Stuttgart, Germany. In this position his main research fields are high voltage technique, power transmission and electromagnetic compatibility (EMC). Prof. Tenbohlen holds several patents and published more than 500 papers. He is member of the IEEE, CIGRE study committee A2 (power transformers), german committees of A2 (Power Transformers and Reactors), D1 (Materials and Emerging Test Techniques), C4 (Power System Technical Performance), several international working groups. Furthermore, he is convenor of Cigre WG A2.62 "Analysis of Transformer Reliability".

Consideration of Uncertainties in Experiment and Simulation

Professor Myriam Koch Technical University of Munich, Germany

Synopsis

Experimental investigations in high-voltage technology commonly involve statistical analyses to evaluate device failure processes. The statistical nature of typical failure processes, such as electric discharges, is known as aleatoric uncertainty. Besides epistemic, also known as systematic, uncertainty arises due to different batches of materials, varying process parameters, or the uncertainty of measurement devices themselves, to name just a few.

Today, high-voltage engineers increasingly apply numerical field simulation tools in the research and development of high-voltage equipment. Thus, simulation can be seen as the third pillar of science alongside theory and experiment. On the one hand, simulation allows for a deeper understanding of the physical phenomena. On the other hand, simulation analysis reduces the necessary experimental effort in industry development processes, where the demands on compactness and reliability of the devices rise and thus, the applicable safety margins shrink. Therefore, numerical field simulations must be accurate, fast and reliable. To achieve this, first, the practical application has to be modeled as a mathematical problem. Second, the solution has to be approximated by simulation aiming for an optimal tradeoff between accuracy and computational costs. Recently, in the field of numerical simulation, the focus is set on uncertainty quantification and sensitivity analysis to cover the statistical nature of high-voltage phenomena. The talk will give an introduction into this topic and discus possible attempts based on practical examples.

Biography

Myriam Koch received a diploma degree in the field of electrical engineering and information technology from the RWTH Aachen University, Germany, and a Ph.D. degree from ETH Zurich, Switzerland, in 2015. From 2015 to 2020 she worked as research engineer at Pfisterer Kontaktsysteme GmbH, Germany. In addition, she was a guest professor at the High Voltage Laboratories of TU Darmstadt, Germany, in 2018/2019. Since 2020 she has been professor for High-Voltage Engineering and Switchgear Technology at the Technical University of Munich, Germany.

Frontier Outlook: Technology Development in the Power Transmission and Transformation Equipment Industry in China

Gang Li Xi'an High Voltage Apparatus Research Institute Co., LTD, China

Synopsis

Power equipment is the foundation of safe and stable energy supply, and power transmission and transformation equipment manufacturing industry is the core of power equipment industry.

At present, China has made a commitment to reach a carbon peak and be carbon neutral, which will bring about a new change in the energy structure. In this speech, the current situation of the technology development of the power transmission and transformation equipment industry, the opportunities and challenges brought by the policies of carbon peak and carbon neutral, and the development direction and suggestions of the power transmission and transformation equipment industry.

Biography

Gang Li received his Master degree in Electrical Engineering from Xi'an Jiaotong University (XJTU), Xi'an, China, in 2013. He is now serving as the secretary of technical committee of China High Power Testing Liaison (CHPTL), and the member of UHV AC Transmission Standardization Technical Committee.

Over the past 19 years, he has been focusing on test technology and standard research in the fields of the test of highvoltage apparatus and the development of oscillating circuit and synthetic test. During this period, he undertook many important research projects and technical work. He has won nine of various Ministerial and Provincial-level science and technology awards. He has published more than 10 technical papers and has led the drafting of several national and industry standards in the fields of high-power test technology.

INVITED SPEAKER

After-installation Testing and PD Monitoring of HVAC and HVDC Polymeric Land Cable Systems

Professor Ronald Plath Technical University Berlin, Germany

Synopsis

The installation of power cable systems inevitably requires the installation of cable accessories (terminations, joints) on site. Although cables and active paths of cable accessories (stress cones for field control) are already routine tested at the factory, on-site installation carries a remaining risk of assembly faults. Even weak defects inside cable accessories may lead to breakdown much later in operation, causing unplanned outages. In order to detect and, if necessary, eliminate critical assembly faults prior to the commissioning of cable systems, the relevant international standards (IEC 60840, IEC 62067 and IEC 62895) prescribe after-installation voltage tests. Accordingly, HVAC cable systems have to withstand an 1h AC voltage test and HVDC cable systems to withstand an 1h DC voltage test. In general, voltage tests can only end with "passed" or "failed". However, weak but critical defects can remain undetected if they do not lead to breakdown during the 1-hour test period. This applies in particular to DC voltage tests, where field-enhancing defects in polymeric insulation cause increased space charge injection that effectively "shields" the defect from detection by greatly reducing the maximum electric field stress (compared to space-charge free Laplace field). For HVAC equipment, it is well known that the limitations of voltage-only testing can be overcome to a good extent by partial discharge (PD) measurements during AC testing. This is reflected in the corresponding recommendations of IEC 60840 and IEC 62067. Both standards recommend to (optional) combine after-installation AC voltage tests with on-site PD measurements. For HVDC polymeric cables, however, the situation is not so straightforward. IEC 62895 (as of May 2017) does not currently recommend on-site PD measurements, only DC voltage tests. After a lengthy discussion among German cable experts, an additional recommendation for after-installation tests was included in the corresponding German standard DIN IEC 62895, VDE 0276-2895 (as of February 2019): AC voltage tests, if possible combined with PD measurements, should (also) be performed on HVDC polymeric cable systems.

This presentation will provide an overview of on-site PD measurements and monitoring on HVAC and HVDC polymeric cable systems and discuss some issues arising from ever-increasing cable length.

Biography

Ronald Plath was born in Berlin, Germany in 1962. He received the M.S. and Ph.D. degrees in electrical engineering from the Technische Universität Berlin in 1987 and 1994, respectively. He is a member of DKE K124 (German mirror committee of IEC TC42), of CIGRE DAK B1 (German mirror committee of CIGRE SC B1) and of CIGRE B1 and D1 working groups. Prof. Plath is currently convenor of the Cigre WG D1.63 "Partial discharge detection under DC stress". He is author of several international reports. Prof. Plath has over 30 years of experience in high voltage testing, especially in on-site testing of high voltage cable systems combined with PD measurements. In 2013, he returned to the Technische Universität Berlin as a full professor of high voltage engineering.

Oral Session 6

November 23, 2021 (Tuesday)

Session 6: Advanced materials and insulation systems: outdoor, indoor, solid, liquid and gas insulated, nanodielectrics, eco-friendly and other new materials, novel insulation system / Industrial applications of high voltage: non-energy applications in different fields / High voltage engineering problems in future power grids: distribution generations, smartening of power networks, and integration of renewable energies

Chairs: Assoc. Prof. Jiandong Wu, Shanghai Jiao Tong University, China

Assoc. Prof. Daomin Min, Xi'an Jiaotong University, China

Venue: Hall 2

14:00-14:25	Invited Speaker: Professor Uwe Schichler/Ms. Sahar Estahbanati, Graz University of Technology,
Invited	Austria
	Beneficial Electrode Arrangement for Electroaerodynamic Propulsion (NO. 80)
	Sahar Estahbanati, Uwe Schichler (Institute of High Voltage Engineering and System
	Performance, Graz University of Technology, Inffeldgasse 18, 8010 Graz, Austria)

14:25-14:40	Ramp sinusoidal breakdown of epoxy under high voltage waveforms at different frequencies (NO. 1413)
	Weichuan Zhao, Tianming Luo, Mohamad Ghaffarian Niasar (Delft University of Technology, Netherlands)
14:40-14:55	HOW CONDUCTANCE CHARACTERISTICS OF NONLINEAR MATERIALS
11.10 11.20	INFLUENCES THE PERFORMANCE OF ADJUSTING POTENTIAL DISTRIBUTION IN NEEDLE PLATE MODEL (NO.1222)
	Zhiwen Huang, Jun Hu, Zhikang Yuan, JinzhongLi, Yu Yin, Hao Tang (Tsinghua University, China)
14:55-15:10	DIELECTRIC PROPERTIES IMPROVEMENT OF POLYPROPYLENE BY SILANE
	GRAFTING MODIFICATION FOR HVDC CABLE INSULATION (NO. 1107)
	Shixun Hu, Linzhen Fan, Wei Wang, Qi Li, Jinliang He (North China Electric Power University, China)
15:10-15:25	The role of filler dissipation in material properties of Ethylene-Propylene-Diene Monomer for
	cable insulation (NO. 84)
	Jing Xu, Xiangyu Fan, Jing Chen, Chongjun Tian, Jinghui Gao, Lisheng Zhong (State Key Laboratory of Electrical Insulation and Power Equipment, Xi'an Jiaotong University, China)

Oral Session 12

November 24, 2021 (Wednesday)

ISH2021

Session 12: Advanced materials and insulation systems: outdoor, indoor, solid, liquid and gas insulated, nanodielectrics, eco-friendly and other new materials, novel insulation system

Chairs: Assoc. Prof. Qi Li, Tsinghua University, China

Prof. Yang Xu, Xi'an Jiaotong University, China

Venue: Hall 4	
8:30-8:55	Invited Speaker: Professor Xingyi Huang, Shanghai Jiao Tong University, China
Invited	Thermally conductive polymer composites for high voltage insulation (N0. 23)
	Xingyi Huang, Pengli Li (Shanghai Jiao Tong University, China)
8:55-9:10	CALCULATION OF THE DIELECTRIC BREAKDOWN STRENGTH OF CO2-O2
	MIXTURES BY CONSIDERING ION KINETICS (NO. 910)
	Yuyang Yao, Jiayu Xiong, Boya Zhang, Xingwen Li (Xi'an Jiaotong Unversity, China)
9:10-9:25	SURFACE DISCHARGE AGING CHARACTERISTICS OF GFRP AT LOW TEMPERATURES
	(NO. 716)
	Zhibin ZHANG, Ming REN, Bo SONG, Boning YU, Wenjie FAN, Ming Dong (Xi'an Jiaotong
	University, China)
9:25-9:40	Effect of Silicone Grease on Surface Topography and Breakdown Characteristics of XLPE-SiR
	Interface (NO. 851)
	Zerui Li, Kai Zhou, Pengfei Meng, Hao Yuan, Zikang Wang, Yao Fu (Sichuan University, China)
9:40-9:55	STUDY OF VACUUM THERMAL AGING ON THE MECHANICAL AND DIELECTRIC
	PROPERTIES OF LIQUID SILICONE RUBBER (NO. 802)
	Zhe Xu, Lu Cheng, Wenfeng Liu, Hongbo Liu, Mengqi Wang, Shengtao Li, Ziqi Zhang, HaoZheng
	(Xi'an Jiaotong University, China)
9:55-10:15	Coffee Break
10:15-10:30	Molecular Dynamics Simulation of Electrical Properties and Surface Binding Energy of PVDF/
	BNNS Composites Based on ReaxFF (NO. 731)
	Xiaosong Wang, Tong Zhao, Xiuqing Yi, Liang Zou, Li Zhang (School of Electrical Engineering,
	Shandong University, China)
10:30-10:45	Application of SiC-filled Permittivity and Conductivity Graded Material (ϵ/σ -FGM) in HVDC
	GIS Spacer (NO. 729)
	Rachmawati Rachmawati, Hiroki Kojima, Katsumi Kato, Nabila Zebouchi, Naoki Hayakawa
	(Nagoya University, China)
10:45-11:00	Influence of Aging on Prebreakdown Characteristics of Ester Liquids with Experimental and
	Statistical Analysis (NO. 711)
	T. Jayasree ^{1*} , U. Mohan Rao ¹ , I. Fofana ¹ , S. Brettschneider ¹ , E. M. Rodriguez Celis ² , P. Picher ²

11:00-11:15	Insulation Characteristics of Quasi-uniform Electric Field and Effect of Metallic Particle
	Contamination in Highly Compressed Dry Air (NO. 1018)
	MAKOTO MIYASHITA, SHINICHIRO NAKAUCHI, YUJI YOSHITOMO, MOTOHIRO SATO

ISH2021

	(MITSUBISHI ELECTRIC Corporation, Japan)
11:15-11:30	Microstructure Design and Breakdown Improvement of PP Films for Capacitors Based on Nano-
	addition (NO. 473)
	Zhaoyu Ran, Boxue Du, Meng Xiao, Jiwen Xing, (Tianjin University, China)
11:30-11:45	INFLUENCE OF TRACE SF6 ON STREAMER CORONA DEVELOPMENT IN SF6/N2
	MIXTURES UNDER POSITIVE DC VOLTAGES (NO. 433)
	Yanliang He, Wei Ding, Anbang Sun, Guanjun Zhang (State Key Laboratory of Electrical
	Insulation and Power Equipment, School of Electrical Engineering, Xi'an Jiaotong University,
	China)
11:45-12:00	EFFECTS OF TIO2 NANOPARTICLES AND ELECTRODE MATERIALS ON IMPULSE
	BREAKDOWN PERFORMANCE OF PROPYLENE CARBONATE UNDER UNEVEN
	ELECTRIC FIELD (NO. 329)
	Shilin Wu, Qing Yang, Zhaotian Zhang, Wenkai He (State Key Laboratory of Power Transmission
	Equipment and System Security and New Technology, Chongqing University, China)

Oral Session 15

November 24, 2021 (Wednesday), 14:00-17:15	
Session 15: HVD0	C technologies and systems: design problems, testing and measuring techniques, advanced HVDC
systems	
Chairs: Professor	Jiansheng Wang, Xi'an High Voltage Apparatus Research Institute Co., LTD, China
Dr. Cateri	na Toigo, SuperGrid Institute, France
Venue: Hall 3	
14:00-14:25	Invited Speaker: Dr. Caterina Toigo, SuperGrid Institute, France
Invited	Simulation Methodology for HVDC Cable Accessories: Focus on Oscillating Polarity Reversal
	and Temporary Overvoltages (No. 945)
	Caterina Toigo, Thanh Vu-Cong, Frank Jacquier, Alain Girodet (SuperGrid Institute, France)
14:25-14:40	Dielectric Long-term Behaviour of Gas-insulated HVDC Systems (No. 930)
	Uwe Riechert (Hitachi-ABB Power Grids, Switzerland)
14:40-14:55	A Method to Accurately Determine the Electric Field Strength in Prefabricated Joints for DC
	XLPE Cables (No. 184)
	Ying Liu, Yanjie Wei, Mingwei Zhao (Xi'an Jiaotong University, China)
14:55-15:10	Partial Discharge Characteristics of HVDC Cables Based on XLPE/EPDM Samples and Typical
	Artificial Defects (No. 685)
	Yuzhu Chen ¹ , Xiaosheng Peng ¹ , Hongyu Wang ¹ , Ashfaque Ahmed Bhatti ¹ , Mingzhong Xu ² , Fanwu
	<i>Chu² (¹Huazhong University of Science and Technology, China; ²China Electric Power Research</i>
	Institute, China)
15:10-15:25	DC Air Humidity Correction Factor for Air External Insulation Revisited (No. 97)
	Liliana Arevalo ¹ , Dong Wu ¹ , Mats Larsson ² (¹ Hitachi-ABB Power Grids-HVDC, Sweden; ² Second
	Hitachi-ABB Power Grids-Research, Sweden)
15:25-15:40	Signal Attenuation and Distortion in Coaxial Cables for High Voltage Measurements (No. 1347)
	Aderrahim Khamlichi ^{1,2} , Fernando Garnacho ^{1,2} , Jorge Rovira ¹ , Pascual Simon ¹ (¹ FFII-LCOE,
	Spain; ² Polytechnic University of Madrid, Spain)
15:40-15:55	DC Electric Fields in HVDC Stations (No. 77)
	Yury Solovyev, Liliana Arevalo (Hitachi Power Grids AB, Sweden)
15:55-16:15	Coffee Break
16:16-16:30	Qualification of MV AC XLPE Cables for DC Operation (No. 118)
	Patrik Alexander Ratheiser, Uwe Schichler (Graz University of Technology, Austria)

Oral Session 16

November 24, 2021 (Wednesday)

Session 16: Advanced materials and insulation systems: outdoor, indoor, solid, liquid and gas insulated, nanodielectrics, eco-friendly and other new materials, novel insulation system

C hairs : Prof. Juny	wei Zha, University of Science and Technology Beijing, China
Prof. Qia	ng Liu, The University of Manchester, UK
Venue: Hall 4	
14:00-14:25	Invited Speaker: Professor Qiang Liu, The University of Manchester, UK
Invited	Development of an Experimental Setup to Study Temperature Distribution of Liquid Natural
	Cooled Power Transformers (NO. 129)
	Sicheng Zhao, Qiang Liu, Xiang Zhang, Mark Wilkinson, Massimo Negro, Muhammad Daghrah,
	Sicheng Zhao (The University of Manchester, United Kingdom)
14:25-14:40	EFFECT OF VOLTAGE & FOG APPLICATION ON AC FLASHOVER CHARACTERISTICS
	OF POLYMERIC INSULATORS UNDER ARTIFICIAL CLEAN FOG TEST (NO. 1440)
	Mohammed El AmineSLAMA (Cardiff University, United Kingdom)
14:40-14:55	Simulation on Weibull-Distribution of PP Nanocomposites Modulated by Carrier Transport and
	Molecular Displacement (NO. 1243)
	Shurao Cai, Ziwei Gao, Minzun Ji, Daomin Min, Shengtao Li, Qingzhou Wu, Jie Liu (School of
	electrical engineering, Xi'an Jiaotong University, China)
14:55-15:10	IMPROVED BREAKDOWN STRENGTH AND ENERGY DENSITY OF ALL-ORGANIC
	POLYMER DIELECTRICS AT ELEVATED TEMPERATURE (NO. 1121)
	Qi-Kun Feng, Shao-Long Zhong, Li-Juan Yin, Jia-Yao Pei, Yong-Xin Zhang, Yan-Hui Song, Zhi-
	Min Dang (Tsinghua University, China)
15:10-15:25	Research on Detection Technology of Bubble Size Distribution in Transformer Oil Based on Mie
	Scattering Theory (NO. 1086)
	Xiaohui He, Qiaogen Zhang, Rui Zhang, Chong Guo, Xingwang Wu (Xi'an Jiaotong University,
	China)
15:25-15:40	COMPATIBILITY TEST OF GASKETS AND COATINGS WITH ESTER INSULATING
	LIQUIDS AT ELEVATED TEMPERATURE (NO. 458)
	Kexin Pan, Xiaojing Zhang, Haoyong Song, Wei Wang, Yang Xu (State Key Laboratory of
	Electrical Insulation and Power Equipment Xi'an Jiaotong University)
15:40-15:55	The Natural Concentration Gradient Distribution of ZnO- epoxy Composites in Preparation
	(NO. 456)
	Xin Liu ¹ , Xiaolin Zhao ² , Xining Li ² , Hao Tang ² , Hanbing Hao ¹ , Zhiwen Huang ³ , Zhikang Yuan ³ ,
	Jun Hu ^{3*} (¹ State Grid Anhui Maintenance Company, Anhui, China; ² China Electric Power
	Research Institute, Beijing, China; ³ Tsinghua University, Beijing, China)
15:55-16:15	Coffee Break
15:55-16:10	Effect of micro-nano particles co doping in epoxy on surface flashover (NO. 422)
	Xiang Gao, Bo Zhang, J in Huang, Huan Niu, Mingru Li, Shengtao Li (The Locomotive and Car
	Research Institute, China Academy of Railway Sciences, China)
16:10-16:25	INFLUENCE OF ZINC OXIDE NANOPARTICLES ON DIELECTRIC PERFORMANCE OF
	NATURAL ESTER OIL (NO. 251)
	Konstantinos Koutras, Ioannis Naxakis, Eleftheria Pyrgioti, Vassilios Charalampakos, Georgios
	Peppas (University of Patras, Greece)
16:25-16:40	Investigation of Electrical and Thermal Behavior of Modified Epoxy Structures for DC and High
	Frequency Applications (NO. 196)
	Muhammad Awais, Chao Dai, Fan-Bo Meng, Ashish Paramane, Xin Wang, Xiangrong Chen
	(Zhejiang University, China)

16:40-16:55 HYDROPHOBICITY AND DENSITY MEASUREMENTS ON NEW AND FIELD AGED MEDIUM VOLTAGE COMPOSITE INSULATORS (NO. 1058) Christos-Christodoulos Kokalis, Kokalis Kokalis, Constantinos Giasafakis, Vassiliki Kontargyri (National Technical University of Athens, Greece)

Oral Session 17

November 25, 2021 (Thursday)		
Session 17: High voltage and high current testing techniques: test procedures, measurements, evaluation, partial		
discharges, space of	charges, dielectric characteristics, emerging test techniques	
Chairs: Dr. Diego	Robalino, Megger Group, USA	
Prof. Yanj	peng Hao, South China University of Technology, China	
Venue: Hall 1		
08:30-08:55	Invited Speaker: Dr. Diego Robalino, Megger Group, USA	
Invited	Novel Approach for Insulation Condition Assessment of High Voltage Substation Equipment at 1	
	Hz (NO. 1054)	
	Diego M Robalino ^{1*} , Vince Oppedisano ² , Kenneth Petroff ² (¹ MEGGER Group, Dallas TX, USA,	
	² MEGGER, Norristown PA, USA)	
08:55-09:10	Correlation between Current and Light Intensity of M Composites in Triggered Lightning (NO.	
	325)	
	Yabei Fan ¹ , Chang He ¹ , Mi Zhou ^{1*} , Daohong Wang ² , Jianguo Wang ¹ , Li Cai ¹ , Yadong Fan ¹	
	(¹ School of Electrical Engineering and Automation, Wuhan University, Wuhan, China,	
	² Department of Electrical, Electronic and Computer Engineering, Gifu University, Gifu, Japan)	
09:10-09:25	Measurement Method for Physical Properties of an Arc Generates and Propagates over an Ice	
	Surface (NO. 335)	
	MENG Wei*, Jianlin Hu, Ruihe Zhang, Xiaofeng Wang, Keer Sun, Xingliang Jiang (Dept. of High	
	Voltage and Insulation Technology, College of Electrical Engineering, Chongqing University	
	Chongqing, China)	
09:25-09:40	F-P Ultrasonic Sensor Based on Four-Cantilever BeamSupported Structure (NO. 449)	
	Kejie Wu ¹ , Weigen Chen ^{1*} , Zhixian Zhang ¹ , Yuxuan Song ¹ , Jiali Lei ² , Fan Liu ³ (¹ State Key

Poster/Semi-oral Session 2

November 23, 2021 (Tuesday), 17:20-18:30

Session 2: Advanced materials and insulation systems: outdoor, indoor, solid, liquid and gas insulated, nanodielectrics, eco-friendly and other new materials, novel insulation system / Industrial applications of high voltage: non-energy applications in different fields / High voltage engineering problems in future power grids: distribution generations, smartening of power networks, and integration of renewable energies

Session Chairs: Assoc. Prof. Xuetong Zhao, Chongqing University, China

Dr. Lu Cheng, Xi'an Jiaotong University, China

Venue: Hall 2

17:20-17:25	Characterization of Polypropylene/ Titatium Dioxide Composites used for 3D Printing of
	Dielectric Functionally Graded Insulators (NO. 947)
	Haoyang Yin, Guanjun Zhang, Wendong Li, Yucheng Zhang, Chao Wang, Zhihui Jiang (State Key
	Laboratory of Electrical Insulation and Power Equipment, Xi'an Jiaotong University, China)
17:25-17:30	AC Breakdown Performance of Natural Esters combined with different biodegradable
	antioxidants under Accelerated Thermal Ageing (NO. 936)
	Wei Peng, Mingxiang Xiong, Xianqin Deng, Zhiyan Peng, WuLu, Wenbin Zhao, Hao Zhang
	(Electric Power Research Institute, State Grid Shanghai Municipal Electric Power Company,
	China)
17:30-17:35	AIMD CALCULATION ON ELECTRON IONIZATION INDUCED FRAGMENTATIONS OF
	C5F10O AND ITS DISCHARGE DECOMPOSION PRODUCTS (NO. 868)
	Jiayu Xiong, Boya Zhang, Mai Hao, Tao Yang, Xingwen Li (Xi'an Jiaotong University, China)
17:35-17:40	Study of phased decomposition characteristics of insulator surface discharge under negative
	polarity DC voltage (NO. 856)
	Ning Kang, Zhen Chen, Chenhao Lei, Honggang Zeng, Wenhai Yu, Dong Xiang, Yongchao Deng
	(Xinjiang Electric Power Company Limited Urumqi Power Supply Company, China)
17:40-17:45	Molecular Dynamics Simulation of the Destruction Mechanism of Polyester Films by Reactive
	Species in Plasma under Corona Discharge Based on ReaxFF (NO. 730)
	Huichao wang, tong zhao, xiuqing yi, liang zou, li zhang (School of Electrical Engineering in
	Shandong University, China)
17:45-17:50	Role of Energy and Gas Pressure on Phase Evolution of Nano-Alumina in Wire Explosion Process
	(NO. 259)
	Prem Ranjan ¹ , Ramanujam Sarathi ² , Hisayuki Suematsu ³ , Jun Jiang ⁴ , Lujia Chen ¹ (¹ Department

Poster/Semi-oral Session 12

November 24, 2021 (Wednesday), 17:20-18:30

Session 12: Advanced materials and insulation systems: outdoor, indoor, solid, liquid and gas insulated, nanodielectrics, eco-friendly and other new materials, novel insulation system Session Chairs: Prof. Zepeng Lv, Xi'an Jiaotong University, China		
Prof. Pengfei Cheng, Xi'an Polytechnic University, China		
Venue: Hall 4		
 17:20-17:25 INVERSE ANALYSIS OF OPTIMUM PERMITTIVITY DISTRIBUTION FOR FGM SPACER IN CONSIDERATION WITH MULTIPLE OBJECTIVE FUNCTIONS IN GASEOUS INSULATION SYSTEM (NO. 401) <i>Katsumi Kato, Hiroki Kojima, Naoki Hayakawa, Hidetaka Masui, Hironori Yanase, Kenji</i> <i>Okamoto, Hitoshi Okubo (National Institute of Technology, Niihama College, Japan)</i> 17:25-17:30 HIGH DIELECTRIC PERMITTIVITY POLYIMIDE FILMS BY CONSTRUCTING POLAR UNITS (NO. 368) <i>Yaya Tian¹, Liangyu Gui¹, Ming-Sheng Zheng¹, Jun-Wei Zha^{1,2*} (¹School of Chemistry and</i> <i>Biological Engineering, University of Science and Technology Beijing, Beijing, China; ²Beijing</i> 		
Advanced Innovation Center for Materials Genome Engineering, University of Science and Technology Beijing, Beijing 100083, China)		

17:30-17:35	Study on altitude correction coefficient of pollution flashover voltage of UHVDC insulators with different shed shapes (NO. 366)
	Ruiping Huang, Liang Tian, Jun Zhou, Yueneng Xu (China Electric Power Research Institute Co., Ltd, China)
17:35-17:40	INHIBITION OF THE SPACE CHARGE OF LLDPE BY CROSSLINKING EFFECT (NO. 334)
	Yinge Li, Lisheng Zhong, Liang Cao, Wei Zhao, Jinghui Gao, HongZ hang (State Key Laboratory of Electrical Insulation and Power Equipment, Xi' an Jiaotong University, China)
17:40-17:45	Research on Development and Performance of the Strain Composite Cross-Arm in 10kV Distribution Line (NO. 326)
	Songsong Zhou, Jun Zhou, Zheyuan Li, Le Li, Hechen Liu, Yuan Gui, Xiaohan Dai (China Electric Power Research Institute, China)
17:45-17:50	Effect of Modified Silicone Rubber on Discharge of SR/XLPE Composite Interface (NO. 278) Jiarui Han, Yifan Hao, Guangzhi Guo, Junbo Deng, GuanjunZ hang (Xi'an Jiaotong University, China)
17:50-17:55	STUDY ON EXTERNAL INSULATION DURABILITY TEST OF COMPOSITE CROSS ARM INSULATOR (NO. 267) Jing Nan, Xuechun Han, Feng Huo, Hengdong Song, Xingyu Liao (China Electric Power
	Research Institute, China)
17:55-18:00	PHYSICAL PARAMETERS CALCULATION OF C4F7N/CO2 MIXTURE (NO. 255) Yang Meng, Zhichuang Li, Zhongbo Zheng, Weidong Ding (Xi'an Jiaotong University, China)
18:00-18:05	Mechanisms behind the transition of streamer propagation mode in natural ester around the acceleration voltage under lightning impulse voltages (NO. 234) <i>Wu Lu, Feng Li, Wenbin Zhao, Zhiyan Peng, Hao Zhang, Zhiyan Peng (Shanghai University Of Electric Power, China)</i>
18:05-18:10	ANALYSIS OF WIND DEVIATION RESISTANCE OF COMPOSITE INSULATOR REPLACING PORCELAIN INSULATOR IN TANGENT TOWER AT DIFFERENT WIND SPEEDS (NO. 232)
18:10-18:15	 Yaqing Ji, Zhijin Zhang, Jun Xu, Xiaojie Wang, Xingliang Jiang (Chongqing University, China) Effect of Nanofiller Content on DC Conductivity and Breakdown Strength of PP/MgO Nanocomposites (NO. 209) <i>QinrongLi, Daomin Min, Wei Shen, Mengyao Han, Shengtao Li (Xi'an Jiaotong University, China)</i>
	Chinar

November 24, 2021 (Wednesday), 19:30-21:00

Session 13: High voltage and high current testing techniques: test procedures, measurements, evaluation, partial discharges, space charges, dielectric characteristics, emerging test techniques

Session Chairs: Assoc. Prof. Ming Ren, Xi'an Jiaotong University, China

Assoc. Prof. Xi Yang, Hefei University of Technology, China

Venue: Hall 1

19:30-19:35	Discharge Characteristics of Actual Winding Turn-to-turn Structure inside Transformers under Oscillating Switching Impulse Voltage (NO. 384)
	Ruochen Guo, Yuan Sun, Xuanrui Zhang, Jiushan Wu, Junhao Li* (State Key Laboratory of
	Electrical Insulation and Power Equipment, Xi'an Jiaotong University, Xi'an, China)
19:35-19:40	Electric Field Simulation and Partial Discharge Test of 10 kV Cable Terminations with Hole Deffects (NO. 393
	Chao Wang ¹ , Chunfang Wu ¹ , Weiyang Zhen ¹ , Tao Huang ² , Jiapeng Xiao ² , Yun Chen ² , Yanwen
	Chen ² , Yanpeng Hao ^{2*} , Licheng Li ² (¹ Jiangmen Power Supply Bureau of Guangdong Power Grid
	Co., Ltd, 529000, Jiangmen, China, ² School of Electric Power Engineering, South China University
	of Technology, 510630, Guangzhou, China)
19:40-19:45	Partial Discharge Detection Technology of Live Ring Network Cabinet Based the 5G Cloud Computing (NO. 412)
	Xiaoqiu Lu ¹ , Yan Zhou ² , Xiaoxian Zhu ³ , Yujie Cao ⁴ , Zhibin Xu ⁵ , Chun Ai ⁶ (¹ State Grid Shanghai Jinshan Power Supply Company, Shanghai, China, ² State Grid Shanghai Jinshan Power Supply
	Company, Shanghai, China, ³ State Grid Shanghai Jinshan Power Supply Company, Shanghai,
	China, ⁴ State Grid Shanghai Jinshan Power Supply Company, Shanghai, China, ⁵ Bingo Electric
	Technology (Shanghai) Co., Ltd, Shanghai, China, ⁶ Bingo Electric Technology (Shanghai) Co., Ltd,
	Shanghai, China)
19:45-19:50	Dielectric Frequency Response of Oil-paper Insulation Under Uneven Damp (NO. 423)
	Ronglun Zhang ¹ , Huanmin Yao ² , Haibao Mu ^{2*} , Jiasui Wu ¹ , Daning Zhang ² , Haoxiang Zhao ² ,
	Guanjun Zhang ² (¹ Hainan Electric Power Research Institute, Hainan Power Grid Co., Ltd, Haikou,
	People's Republic of China, ² State Key Laboratory of Electrical Insulation and Power Equipment,
	Xi'an Jiaotong University, Xi'an, Shaanxi, People's Republic of China)
19:50-19:55	Effect of Thermal Aging on the Decay-like Fracture of Silicone Rubber Composite Insulator (NO. 445)
	Hao Shen ^{1*} , Hui Liu ¹ , Yu Deng ² , Ran Jia ¹ , Chao Zhou ¹ , Yang Zhang ¹ , Rong Liu ¹ , Chuanbin Liu ¹
	(¹ Shandong Electric Power Research Institute, Jinan, China, ² China Electric Power Research
10.55.20.00	Institute, Beijing, China)
19:55-20:00	Evaluation of High Voltage Switchgear based on RBF Neural Network Information Fusion Technology (NO. 474)
	Jing Xie, Qi Song, Linglin Luo, Tianyi Wang* (Department of Electrical Engineering, Kunming
	University of Science and Technology, Kunming, China)
20:00-20:05	Study on the characteristics of the Pre-breakdown Process of Nanosecond High-Voltage Pulse
	Discharge in Water (NO. 1024)
	Kangkai Liu ^{1,2*} , Rui Zhang ¹ , Guanglin Bai ¹ , Tao Wang ¹ , Lujia Wang ² , Jianwen Zhang ² (¹ State Grid
	Economic and Technological Research Institute Co., Ltd. Changping District, Beijing, China,
	² School of Electrical and Power Engineering, China University of Mining and Technology, Xuzhou,
	China)
20:05-20:10	Numerical Simulation of Space Charge in XLPE DC Cable under Temperature Gradient (NO. 1331)
	Chi Chen*, Jiaxing Li, Ni Zhao, Chuang Wang, Deyi Wang, Guoqing Yang (School of electrical
	engineering, Xi'an University of technology, Xi'an, China)
20:10-20:15	Dynamic and Quantitative Risk Assessment of Ultra-High Voltage Converter Transformers (NO.
	1473)

Yadong Xing*, Yang Liu, Yizhuo Hu, Ming Dong (State Key Laboratory of Electrical Insulation and

Power Equipment, School of Electrical Engineering, Xi'an Jiaotong University, Xi' an, China)

20:15-20:20 Research on the Developing Law of the Air-Gap Discharge in Oil-Paper Insulation by Multiple Methods (NO. 981)

ISH202

Qingdan Huang, Haoyong Song^{*}, Wei Wang, Yuqing Chen (Guangzhou Power Supply Bureau, Guangdong Power Grid Co., Ltd., Guangzhou, China)

20:20-20:25 Research on the Temperature Rise Characteristics of Converter Transformer Valve-side Bushing and the Prediction Model of Full State Index (NO. 1323) *Mu Lin¹, Kai Liu^{1*}, Zhen Ding¹, Hao Tang², Yan Yang¹, Guangning Wu¹ (¹School of Electrical*

Engineering Southwest Jiaotong University, Chengdu, China, ²China Electirc Power Research Institute, Beijing, China)

20:25-20:30 An Electro-Thermal Model for Dielectric Heating in Silicone Elastomers under Harmonic Distorted Voltages (NO. 357)

Jun Ting Loh^{1*}, Stefan Kornhuber¹, Thomas Linde², Stephan Schlegel² (¹Department of High Voltage Engineering/Materials/Electromagnetic Theory, University of Applied Sciences Zittau/Görlitz, Zittau, Germany, ²Institute of Electrical Power Systems and High Voltage Engineering, Technische Universität Dresden, Dresden, Germany)

- 20:30-20:35 Application of Finite Element Method to Complete the Installation Requirements in a Buried Cable According to IEC60287 Standard (NO. 536) Sandy JM Balla*, Jeremiah J Walker, Isaac K Kyere (Department of Power Engineering, Vaal University of Technology, Vanderbiljpark, South Africa)
- 20:35-20:40 A Correction Model of Furfural Loss in Transformer oil under Partial oil Change (NO. 710) Heng Zhang, Jiefeng Liu*, Chuhan Geng, Xianhao Fan, Enze Zhang, Yiyi Zhang (School of Electrical Engineering, Guangxi University, Nanning 530004, China)
- 20:40-20:45 Sheath Overvoltage on 220 kV XLPE Cable under Fault Conditions (NO. 191) *R Arunjothi*^{*}, *Thirumurthy, K P Meena (Central Power Research Institute, Bengaluru, India)*
- 20:45-20:50 Determination of Voltage Dependence of Capacitance of 100 kV and 300 kV Compressed Gas Capacitors Using the Kinetic Method (NO. 309)

28 August – 1 September 2023 University of Strathclyde Technology & Innovation Centre, Glasgow, UK

International Symposium on High Voltage Engineering | Glasgow, UK

www.ISH2023.org

Host Organisation: The Institute for Energy and Environment, The Department of Electronic and Electrical Engineering, The University of Strathclyde

Glasgow is a thriving city with a rich cultural history and is regarded as one of the friendliest cities in the world. It is located in the west of Scotland with excellent communication links through three international airports.

It is a gateway to the scenic beauties of the historic Scottish Highlands. There are excellent transport links to other famous historic cities and sites in Scotland like Edinburgh and Stirling.

The conference venue is the University of Strathclyde's Technology and Innovation Centre. As well as being a hub for industry facing research at the University the TIC provides modern conference facilities in a venue at the heart of Glasgow close to affordable accommodation. The TIC has been hosting International conferences in Glasgow for over 5 years.

The scope of the 23rd International Symposium on High Voltage Engineering will include the following areas:

- · Electromagnetic fields
- Transient voltages
- High voltage and high current testing techniques
- Advanced materials and insulation systems
- Monitoring and diagnostics
- HVDC technologies and systems
- High voltage engineering in future power grids
- Industrial applications of high voltage
- Environmental impacts of high voltage systems

In addition there will be special events to help our young professionals with career development.

Preliminary Deadlines			
Receipt of 500 Word Abstract	1st November 2022		
Preliminary Notice of Acceptance	20th December 2022		
Receipt of Full Papers	1st March 2023		
Final Acceptance	1st May 2023		

As the planning and preparation for the delivery of ISH-2023 develops more information will be made available through the conference website.

After 15 years of wind and rain, we pursue it all the way. Golden crown Electric Co., Ltd. (listed on the science and Innovation Board of Shanghai Stock Exchange, stock code: 688517) is committed to becoming a craftsman enterprise in the industrial 4.0 era in the power equipment industry. The company implements the focus strategy and is committed to "digging 100 meters deep in one meter" to build its core competitiveness.

The company has two core products of "1 + 1", which serve the construction of strong smart grid and smart distribution network

respectively.

The first "1" refers to lightning arrester products. The company's lightning arrester products have three characteristics: complete product specifications and models, leading technology and high market share. They rank first in the bid winning share of State Grid Corporation of China and China Southern Power Grid Corporation for many consecutive years, and the market retention rate of UHV products ranks first, The number of 110kV and above arresters in operation in the State Grid Corporation of China exceeds 22%. The second "1" refers to intelligent distribution network equipment, including distribution network products such as ring network cabinet, column circuit breaker, switch cabinet and box substation. The product technology has reached the domestic advanced level. In the bidding of State Grid Corporation of China and China Southern Power Grid Corporation, the winning share has always been among the top.

The company is an innovation driven enterprise, with R & D centers in Beijing and Xi'an, national enterprise technology center, national postdoctoral workstation, Henan UHV transmission and transformation overvoltage protection equipment engineering technology research center and million-volt UHV laboratory. The company has carried out technical cooperation and talent training with famous domestic universities and scientific research institutions such as Tsinghua University, North China Electric Power University, Xi'an Jiaotong University, Chongqing University, Chinese Academy of electrical Sciences and Wuhan University of technology, and jointly established a "collaborative innovation base" with North China Electric Power University.

The company is a national high-tech enterprise, one of the 100 excellent non-public enterprises in Henan Province assessed by the Henan provincial Party committee and the Henan provincial government, a leading innovation enterprise in Henan Province, a service-oriented manufacturing demonstration enterprise in Henan Province, 50 equipment manufacturing enterprises cultivated by Henan Province, and a charity enterprise in Henan Province; It is a member of the national insulator arrester Standardization Committee, vice chairman of insulator arrester branch of China Electrical Industry Association, vice chairman of Henan smart grid industry alliance, and an excellent supplier of State Grid Corporation of China and China Southern Power Grid Corporation. The golden crown trademark is recognized as a well-known trademark in China by the State Administration for Industry and commerce.
